

# Building high quality delightful App experiences

Full service mobile App building team

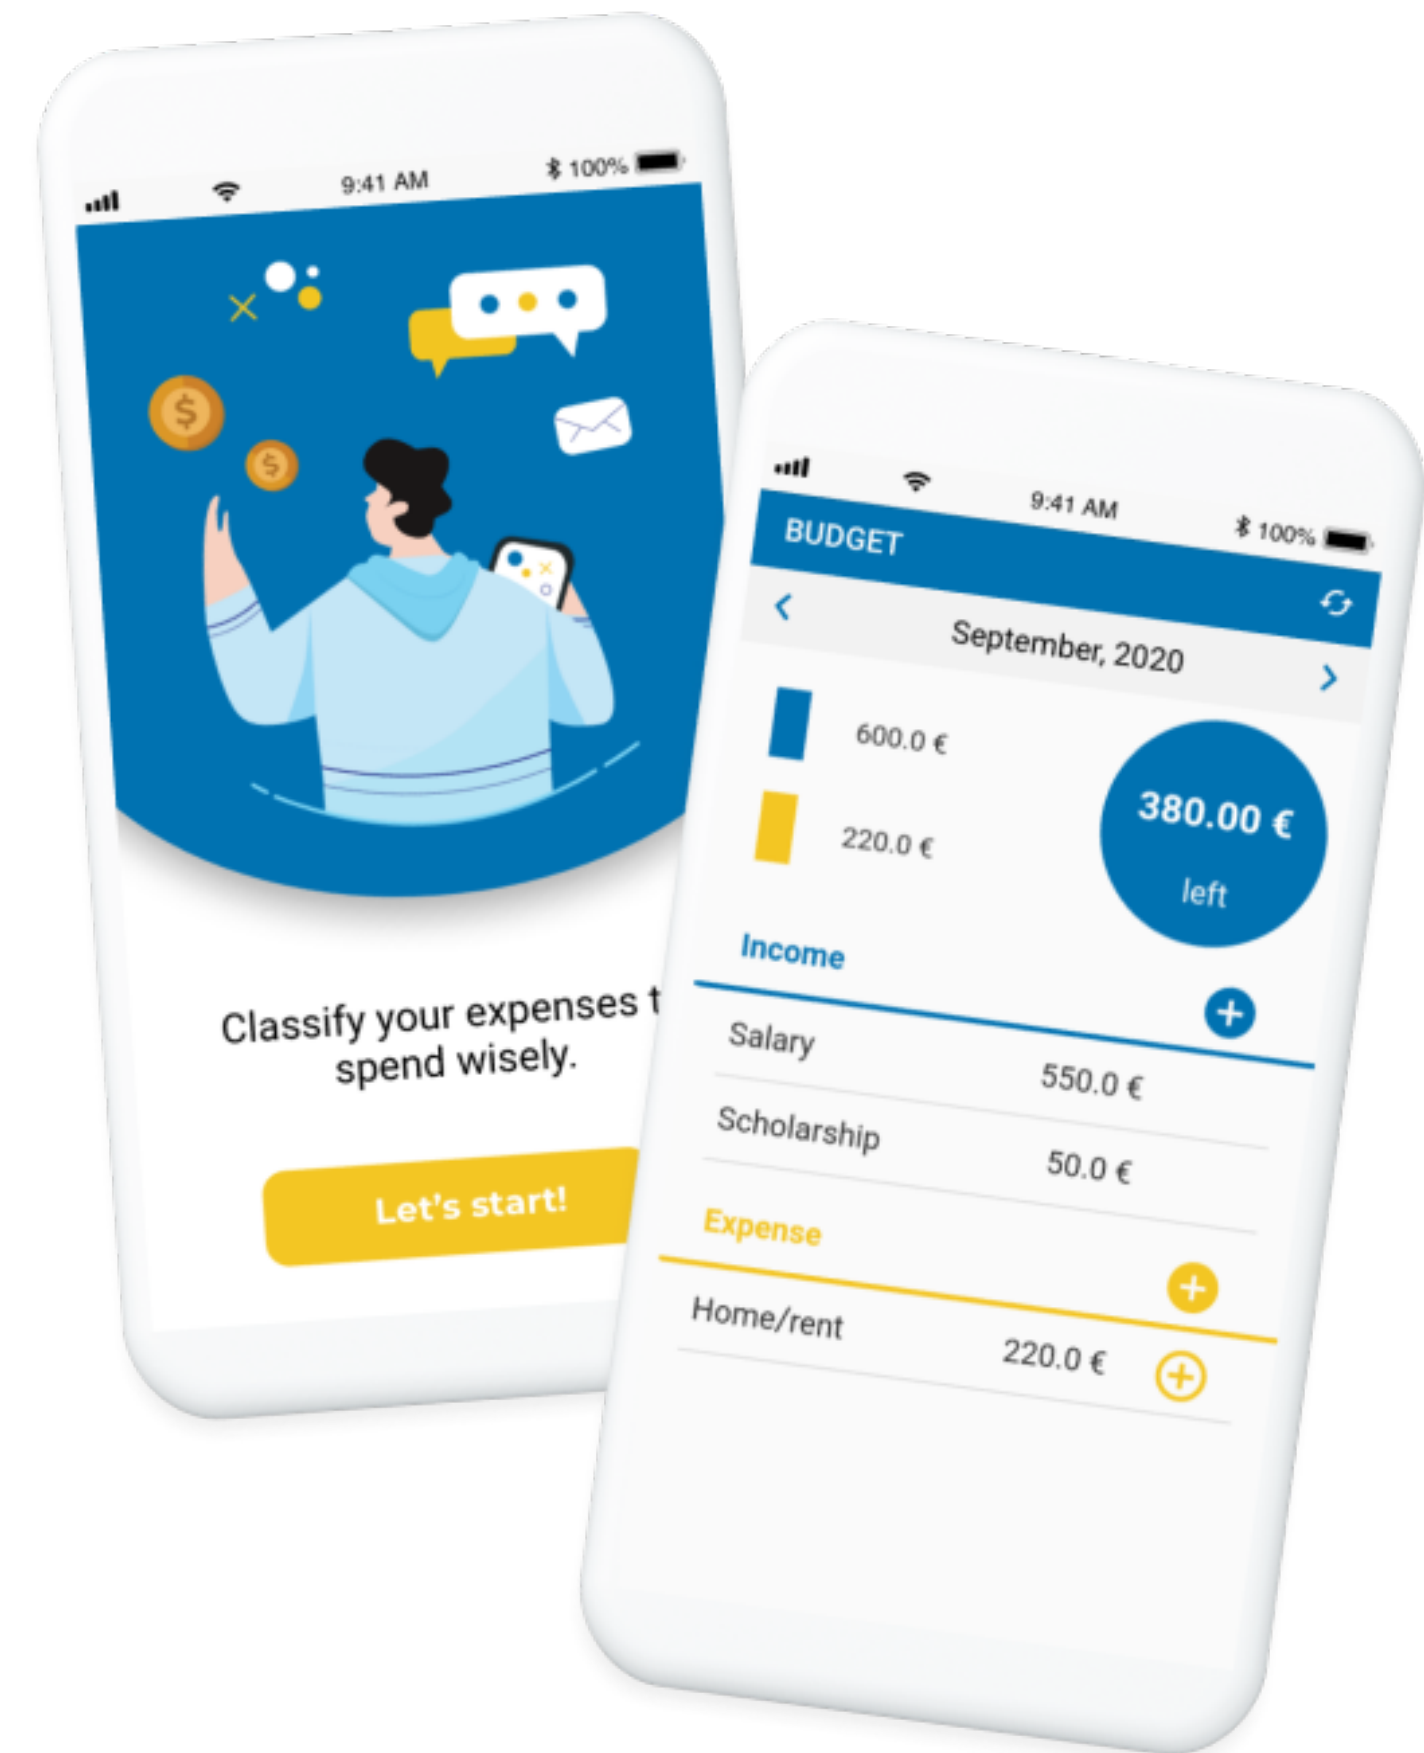

✉ [apps@prog.lv](mailto:apps@prog.lv)

# App Development Services

Full cycle mobile app development services, including:

- Requirements analysis
- Design and UX/UI
- **Flutter** cross platform mobile app development
- Firebase Firestore and other cloud service integration
- In-App payments and subscriptions
- Apple App store & Google Play store deployments
- App testing, Support and maintenance
- Web sites, landing pages

## Meet our team

Hire our expert team for your next App project.

Your App from idea to App stores!

Miķelis

Team Lead, Architect &  
Senior developer

**20+ year experience in  
digital service development**

Elīna

Senior Mobile App  
Developer

**Full ownership of app  
development process**

Mārcis

Mobile App Developer

**Up and coming expert  
developer**

Diāna

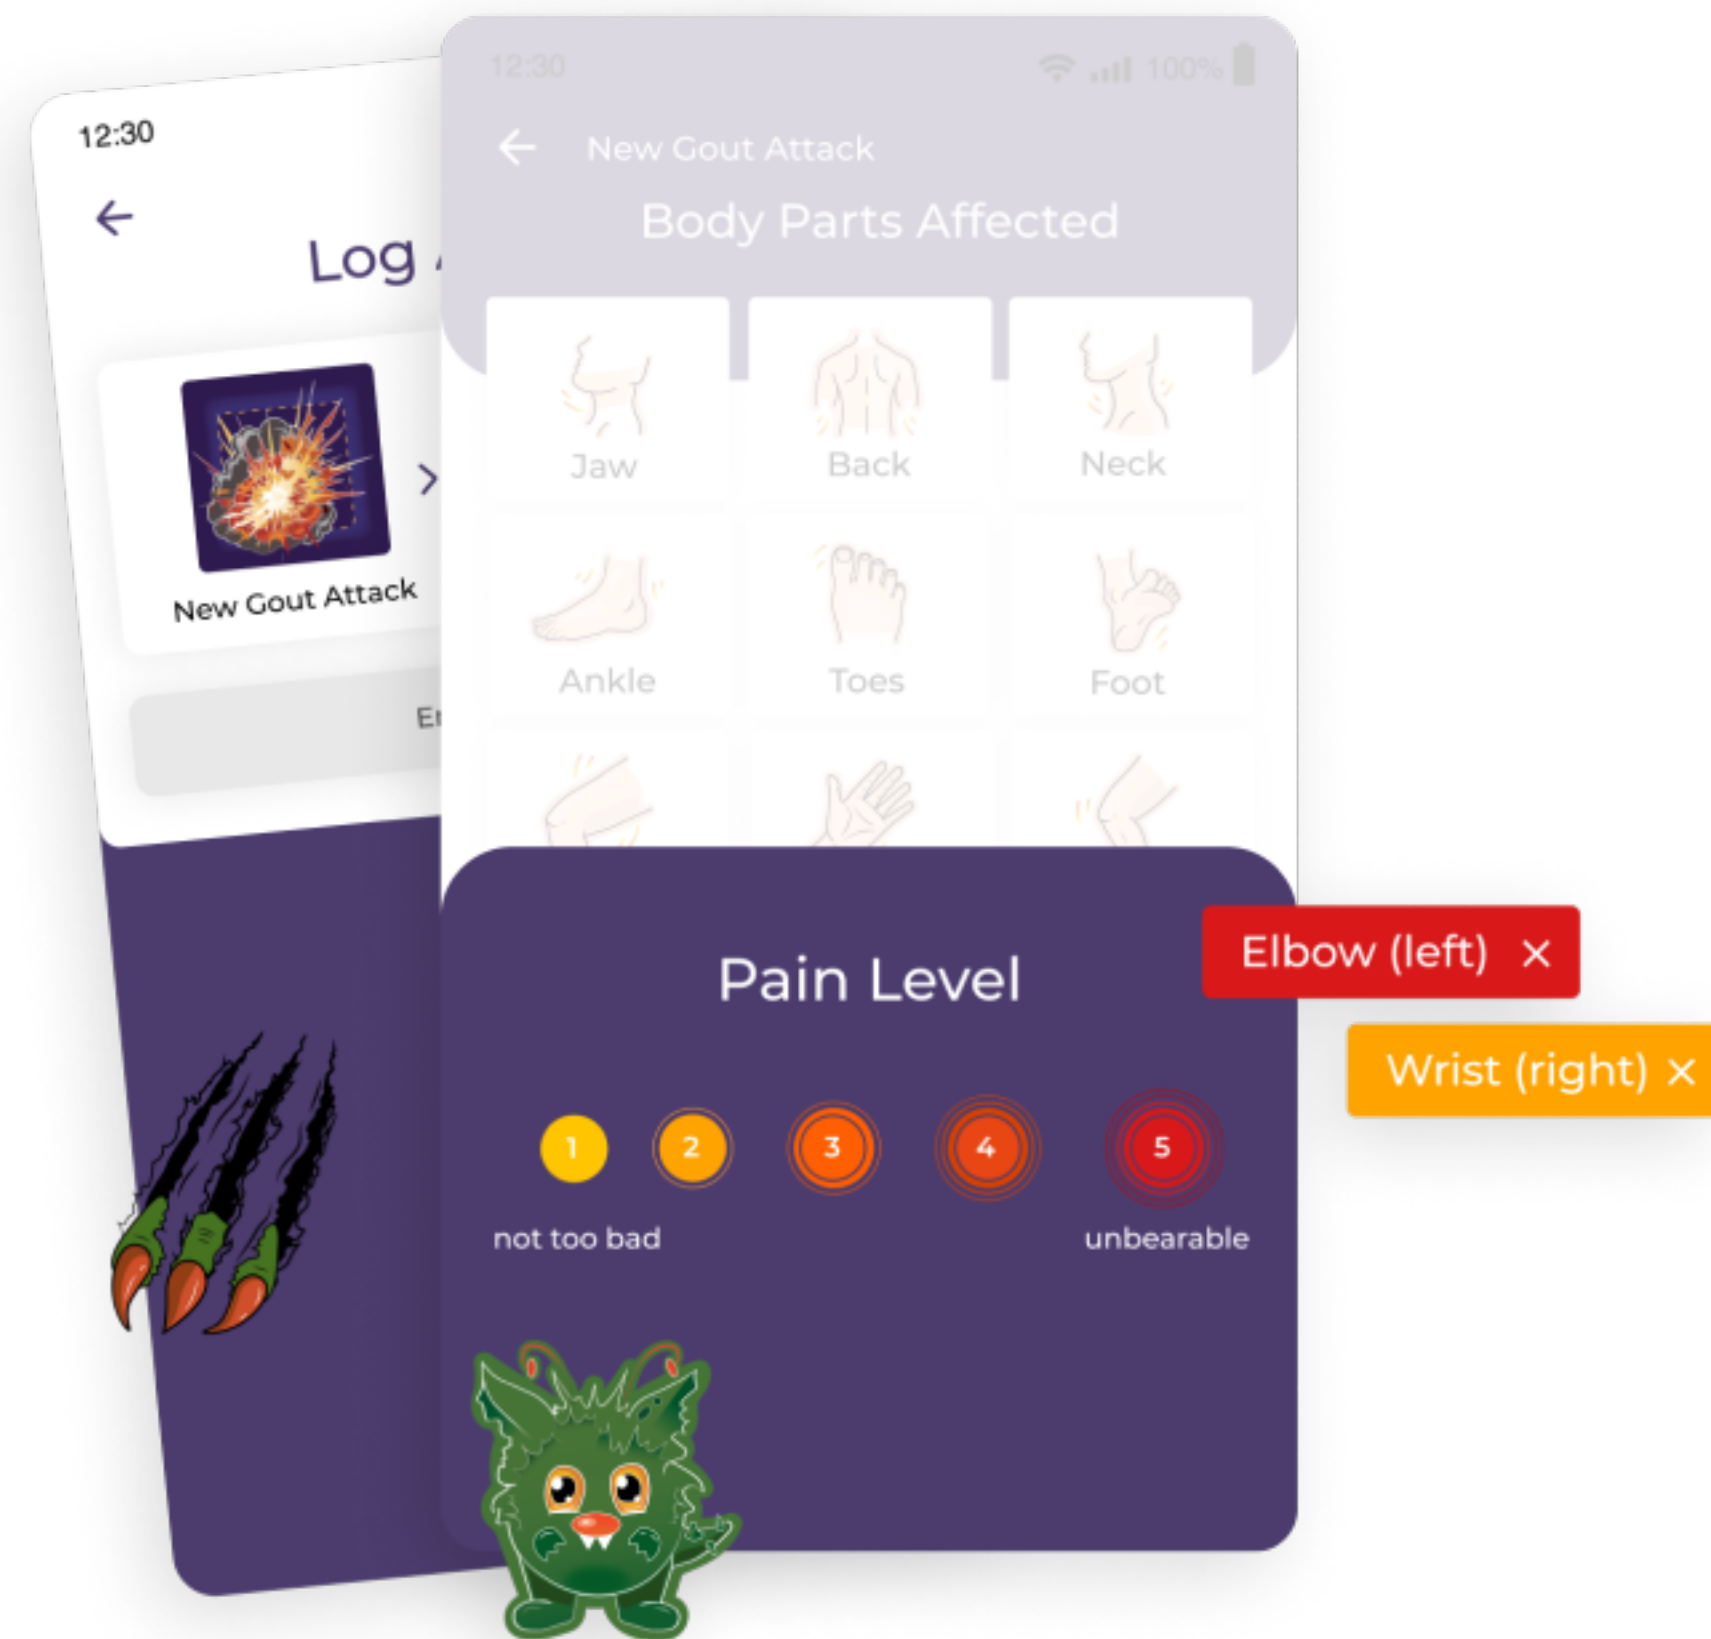

UX/UI Designer

**User researcher,  
designer, digital artist**

# Our work

## Gout Scout case study

Our latest project was a gout attack management app for people who live with gout.

### The challenge

The challenge is that cases of gout are spiralling at an 'astonishing' rate across the world with 41 million people now living with it - up 7% from 1990 (Arthritis & Rheumatology, 2020).

Gout is a non-communicable disease (NCD), there is no cure. There are broad lifestyle and diet factors that are blamed for painful flare-ups. Thousands of people are on online gout communities trying to help one another.

# Our approach

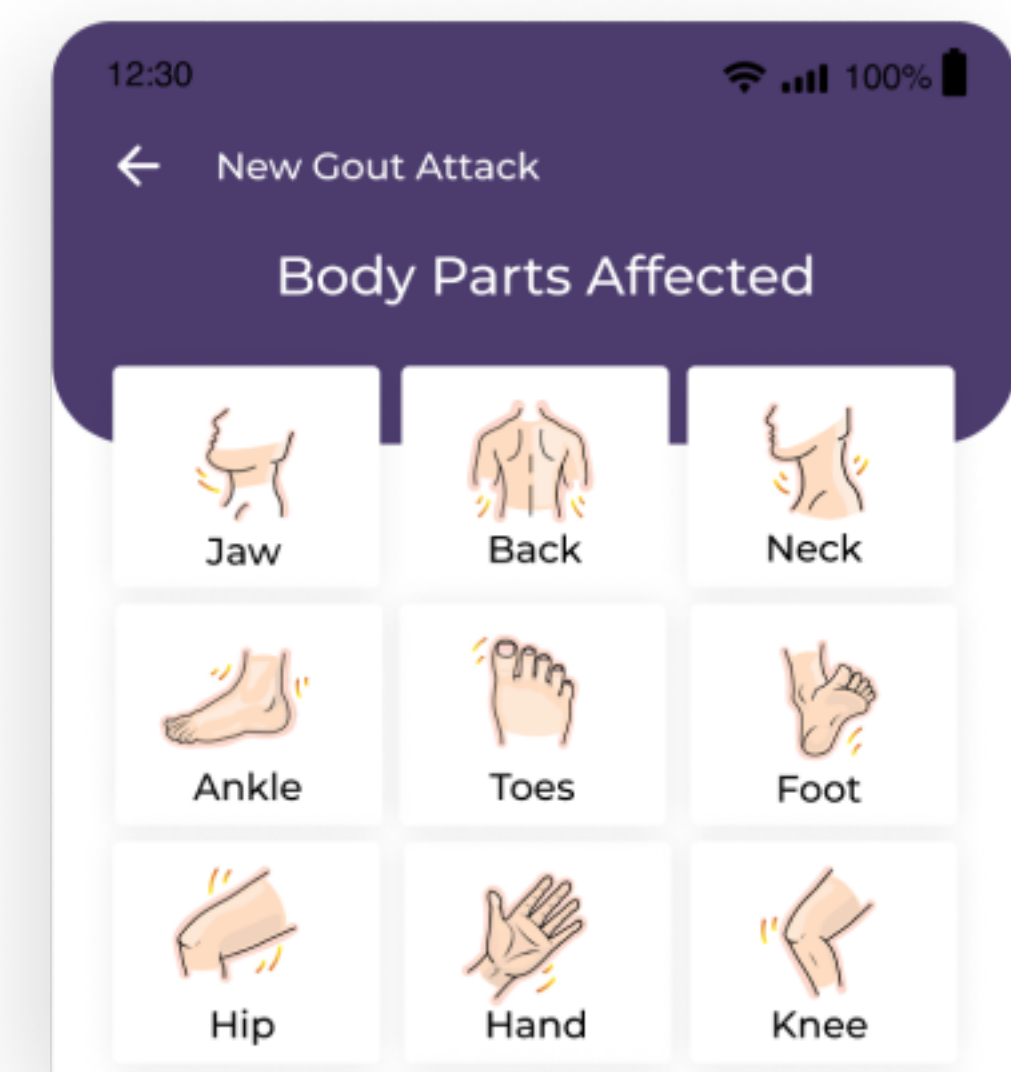

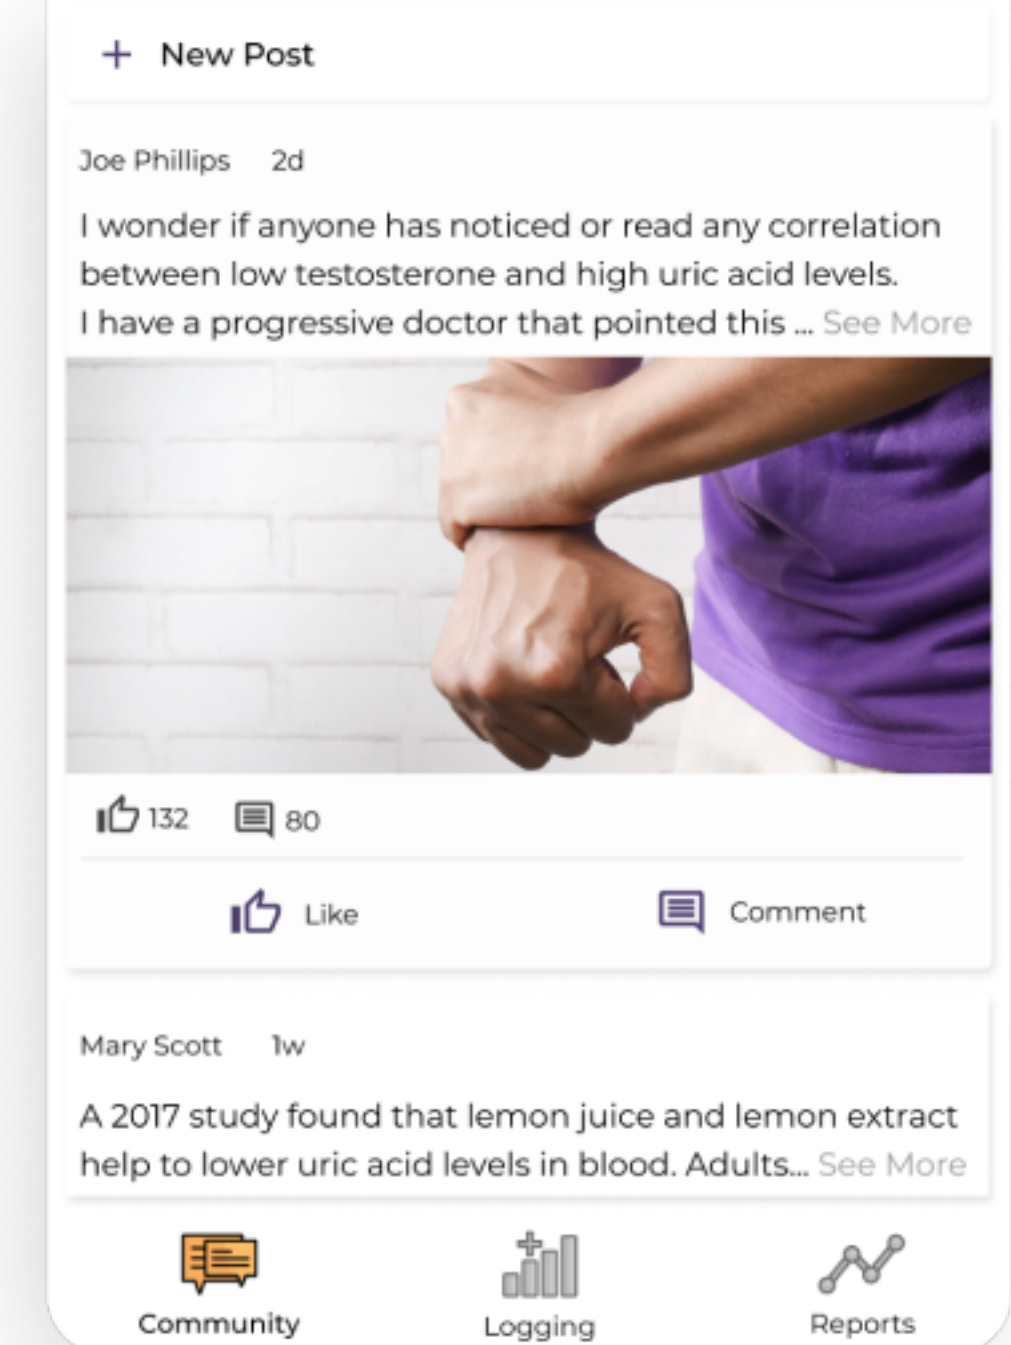

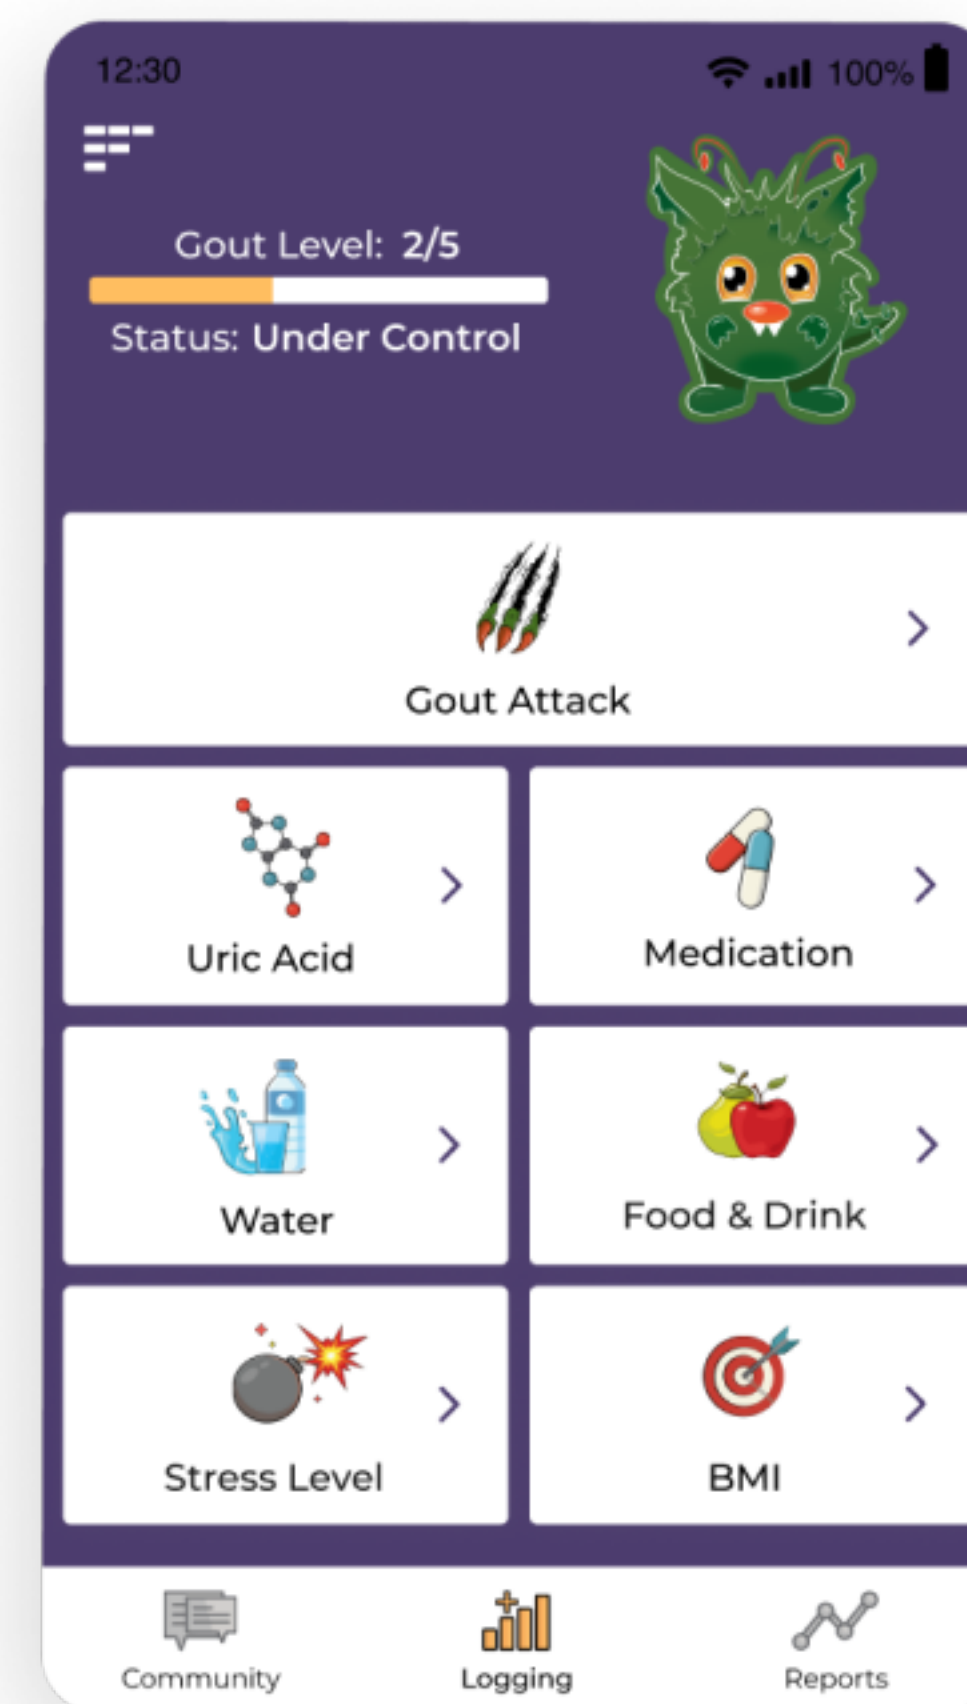

We started by understanding the problem and requirements. It included stakeholder interviews, understanding user needs and doing competitor analysis. Understanding user journey, user flow, creating wireframes and prototypes was also an important part of our process.

We designed the user interface and decided to represent gout as a monster who changes its state based on the pain level the user has. The app includes gaming elements to create an enjoyable and engaging app usage experience. It allows tracking of health and lifestyle data and provides a community section for discussions, as it was important for our users to discuss their condition and find answers to gout related questions.

We worked on improving the app usage experience based on usability testing with the users. We also created a [website](#) to support the mobile application. Finally we published the app in the [App Store](#) and [Google Play Store](#).

The new version of the app was released and it is being tracked with analytics to follow app usage patterns. What excites us the most is knowing our product is helping people to manage their condition.
